

PATENTED

Package by Pi

Every day on a daily basis, millions of packages are being transported from one location to another and the risk of the package being damaged is very high. Safety of your shipment during the delivery process is extremely important.

Solution to this problem is **our patented project Package by Pi** - an envelope that is designed to let the receiver know if the package has been opened or damaged before it reached their doors and how long has it been since the occurrence.

After opening the **smart bottle**, material on the plug reacts to oxygen and creates a visible stain which indicates that the bottle has been opened.

After the damage or opening of the **smart envelope**, the material that comes in the contact with oxygen reacts and creates a visible stain. Depending on the spread of the stain, it informs the receiver how long has it been since the envelope was opened or damaged.

Three characteristics of our products:

Recyclable

Chemical reaction to air

Eco awareness

Technology Partnership is based in Belgrade, Serbia. Founded in 2010, our clients can be found in the European Union and in the United States and Canada. Technology Partnership is proud of its highly educated, multidisciplinary and experienced IT staff.

We are an **PCI DSS, ISO 9001 and ISO 27001 certified**, have Security Clearance issued by Serbian Authorities and our management has over 25 years of corporate experience in the EU.
