

Pi Platform

Unified Secure Communications, Services and
Web-Application Platform

Zero Trust Platform out of the Box!

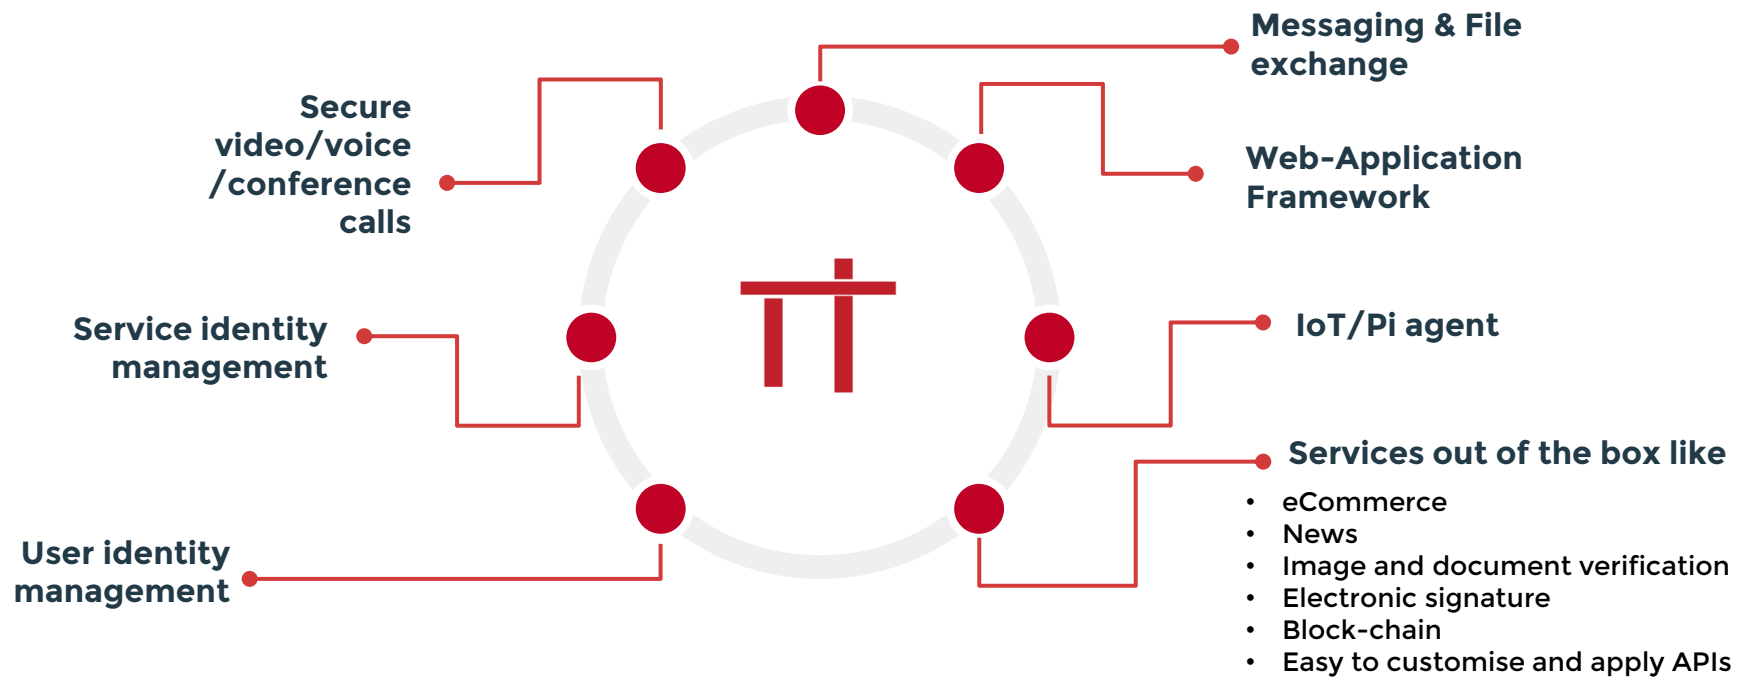

Advantages:

1. High integration of all secure communications, services and applications
2. Simplified deployment and maintenance
3. Easy to use preventing social engineering attacks
4. Highly customisable due to very modular design
5. Ability to be used as an add-on inside existing IT infrastructure

TT ▶ Features:

▶ Comms by Pi

Comms by Pi means that your video and voice calls can be made in complete security thanks to **Pi** Platform. This works for video calls, voice calls, and video conferencing. The Pi Platform also ensures secure messaging and file exchange.

▶ Pay by Pi

Pay by Pi is a new way to make payments based on QR codes. Thanks to **Pi** Platform the unique QR code provides a safe way to pay for your goods and services without getting out your wallet or credit cards.

► Verified by Pi

This is our unique platform that we created to verify the origin and establish trust for digital photos and documents. If it is **Verified by Pi**, it is authentic.

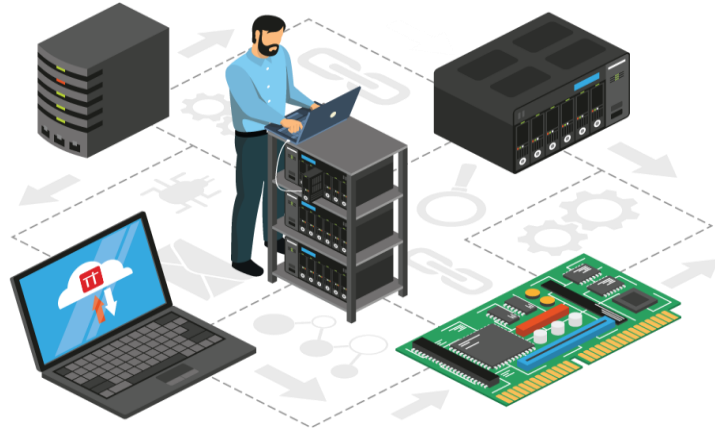

► ID by Pi

Safe and secure remote verification of your document or document photos - your digital ID. No more need to send around your documents and risk losing them.

► Locate by Pi

Locate by Pi is a geofencing app, or a virtual way to establish a perimeter in real space. This can be used for quarantines, for child safety, or any other application that calls for drawing boundaries.

▶ IoT by Pi

IoT by Pi is there to allow you to control everything you have connected over the Internet, this includes:

1. Remote cameras and microphones
2. Sensors and GPS locations
3. Drone movement and surveillance, for easier security control with image verification

▶ Pi Agent

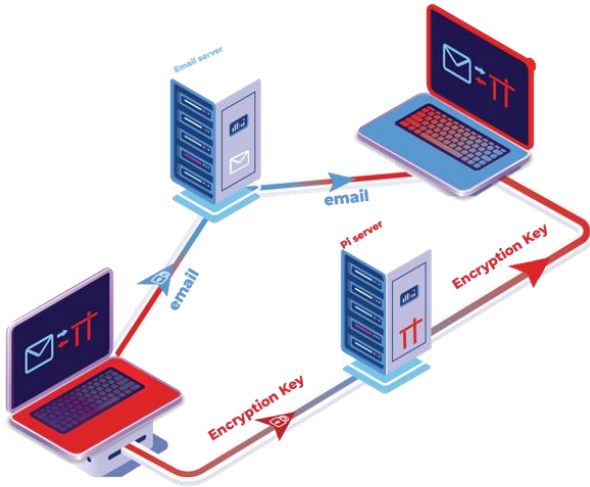

Use Pi Agents to ensure secure authentication for sharing and remote access applications, like TeamViewer, provide reliable email encryption, and safeguard data privacy standards (GDPR) for documents on each workstation/laptop/mobile device.

▶ Email by Pi

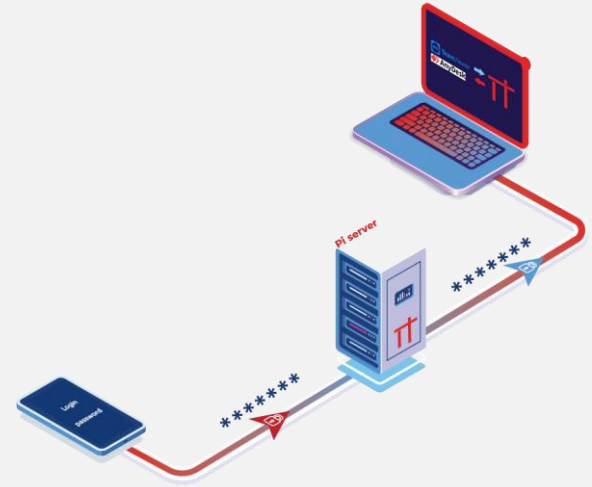

Reliable and secure email encryption, at both sending and receiving ends, by using **Pi Agents**.

Pi Agents then act as email proxies, providing another layer of security using Pi Platform.

▶ Control by Pi

Control by Pi is a safe and effective way to control and monitor activity on your PC or workstation through your mobile phone or device. Secure signals are passed from one to the other by way of the **Pi** secure server.

Web-Applications Framework

The Web-Applications framework is intimately integrated with the **Pi Platform**, allowing limitless options for enterprise solutions with just a single sign-on. Plus double authentication, chat, and calls are also included.

eCommerce by Pi is out of the box solution.

- ▶ Cloud service
- ▶ Private cloud
- ▶ Appliance in a box

There to protect you!
